Guide to the Interpretation of Course Evaluations at UT Austin

The goal of course evaluation process at UT Austin is to drive teaching excellence and to support continuous improvement in teaching and learning experiences. Course evaluations provide snapshots of student perspectives on their course-level learning experiences. Most experts on teaching evaluation advise that no individual method gives the complete picture of an instructor's teaching effectiveness, multiple and diverse measures, on multiple occasions, are advised to give a full picture of the teaching effectiveness of a particular instructor. Moreover, other factors, such as size of class, level of the class, and content of the course, can cause small variations in the ratings. Therefore, student perspectives for a particular instructor or course should be interpreted as a snapshot, and not as providing complete information on the teaching effectiveness of that instructor. For additional details, including the scales and how the Mean scores are calculated, please review the Report Guide at the end of this document or, [UT Austin's Viewing Course Evaluation Results webpage](#).

Creation Date: **Monday, January 26, 2026**

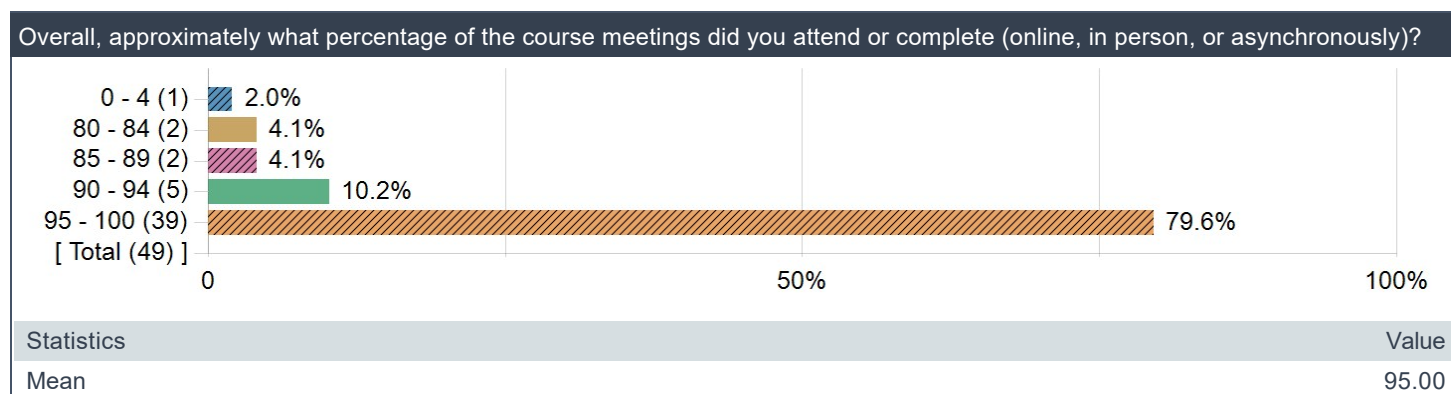

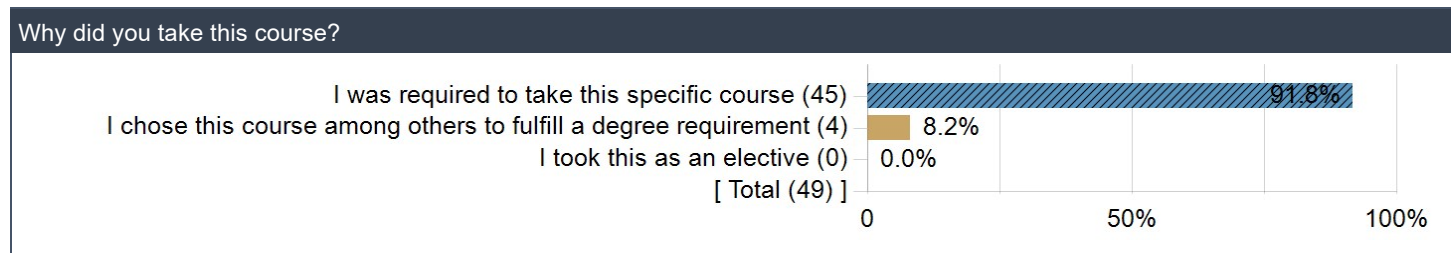

Core Questions

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree	Responded	Mean
During this course, I gained a deeper understanding of the subject matter.	28.6%	59.2%	12.2%	0.0%	0.0%	49	4.16
The course was well organized.	34.7%	36.7%	20.4%	8.2%	0.0%	49	3.98
The instructor clearly explained the course objectives and expectations.	40.8%	42.9%	14.3%	2.0%	0.0%	49	4.22
The instructor fostered an inclusive learning environment.	55.1%	30.6%	14.3%	0.0%	0.0%	49	4.41
The instructor effectively explained the concepts and subject matter in this course.	40.8%	36.7%	22.4%	0.0%	0.0%	49	4.18
The instructional techniques kept me engaged in learning.	34.7%	38.8%	14.3%	12.2%	0.0%	49	3.96
The instructor checked for student understanding of the concepts presented in the course.	51.0%	36.7%	12.2%	0.0%	0.0%	49	4.39

Overall Questions

	Excellent	Very Good	Satisfactory	Unsatisfactory	Very Unsatisfactory	Responded	Mean
Overall, this instructor was	42.9%	30.6%	26.5%	0.0%	0.0%	49	4.16
Overall, this course was	22.4%	32.7%	38.8%	6.1%	0.0%	49	3.71

Other Course Questions

Comment Questions

Identify aspects of the course that were the most effective in helping your learning.

Comment
so many quizzes
The professor was very engaging, he responds to emails well, and answers the chat questions on zoom.
The labs were helpful for the required code.
The aspects of the course that were the most effective in helping my learning were the lab videos. The labs helped solve the questions that I had during the lectures and gave me more examples that helped me understand the concepts more.
The homework and the lab's R-script were the most helpful because it helped me practice.
I liked that we had several resources to practice with.
I really liked how attentive the professor was with his students. He always offered extra materials and videos that helped us learn and grow more as students. I also appreciated that he put himself in the position of the students, and that really helped him teach in a way that made sense. You can tell he goes above and beyond for his students. I'm really satisfied with this course, even though it was online. It was a bit challenging for me because I'm not the best at stats, but I believe the professor did everything he had to do and more.
I liked the homeworks with the practice problems but they were a bit challenging.
Access to R code and class notes
The most effective aspect of STA 235 for my learning was the consistent use of practice problems, homework assignments, and exams to reinforce key statistical concepts. Working through problems step-by-step helped solidify my understanding of probability, distributions, and data analysis rather than just learning them at a surface level. The repetition and immediate application made it easier to identify mistakes and improve over time.
The quizzes helped me stay on top of the material.
Homeworks, recordings of lectures.
homeworks, in-class quizzes, practice material for exams
The language barrier was difficult to get over at first, but he was very hands on with the concepts and I appreciated his enthusiasm.
I feel the homeworks were most helpful in my learning as I was able to review what I learned from class.
Having the recorded lectures was very helpful so that I could rewatch later to get better understanding.
The review videos
The in class lectures were very thorough and detailed.
Liked the slideshows and overall class structure, easy to understand in most cases.
The recorded lectures, recorded r sessions, etc.
Henrique is incredibly smart and caring – always helps
i loved how detailed the lectures were! everything was great
The unlimited homework attempts (when we had those) and the TA review videos.
The homework and slides were helpful.
Having to take a quiz before every class and an exit quiz at the end of class.
Being able to look back at the class lectures.
He worked through problems with us and helped us on the quizzes regularly.
Going over specific questions and examples helped the most.
Had all material available on canvas
Perusal
He cares a lot, will take time to focus on something if someone asks.
The extra content provided.
The readings were more helpful in understanding the concepts than in-class lectures. Also the homeworks allowed for engaging practice which further helped with understanding the concepts.
The presentations and review sections were very helpful.

Identify the aspect of the course that you found most challenging, why you found it was challenging, and

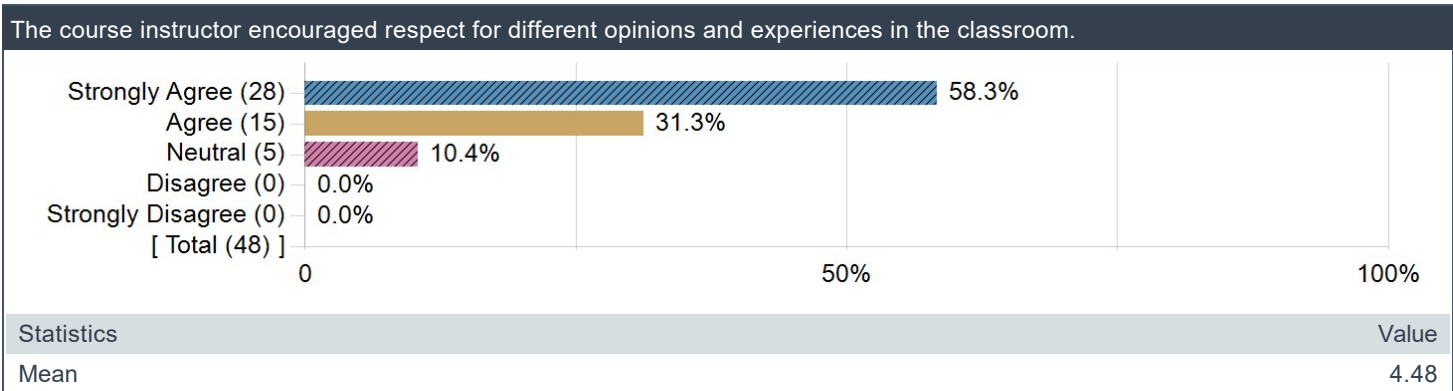

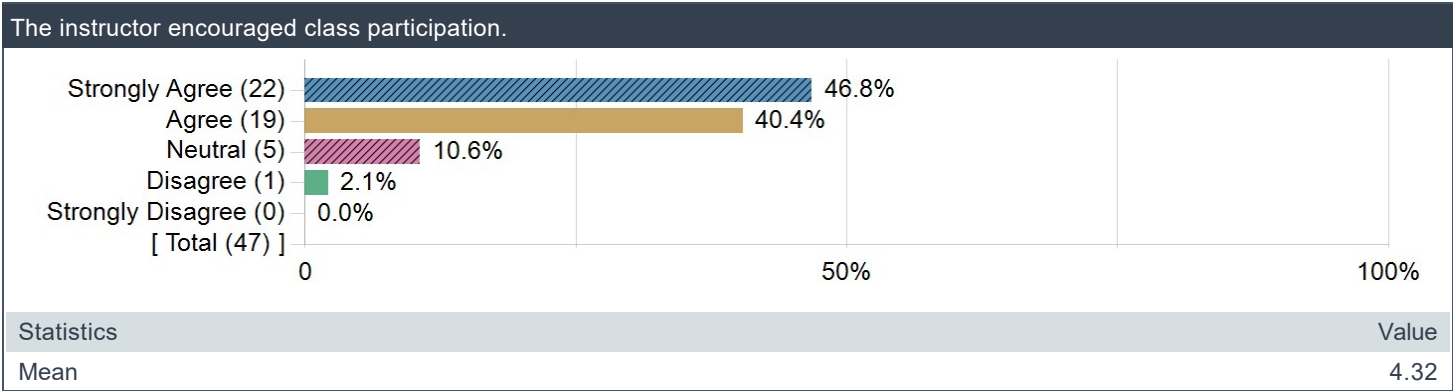

suggest one thing that could be done to help future students meet that challenge more effectively.

Comment
class quiz
The content is very so hope this one class gets divided into two classes, as it would make learning ore easier.
Splitting data was definitely the most challenging for me. Adding more examples or explaining more of the code during the lab would have been helpful.
The only aspect that I found the most challenging was it being my only online class. Even though this is a more personal challenge I just think that I should have taken it in person to be able to ask the questions that I had during lecture.
The most challenging were the quizzes, especially because of issues with the lockdown browser being very slow.
I feel like 2 hour blocks are too short for the amount of content.
The checkpoint quizzes were a little more difficult then expected and so were the homeworks. I think the labs moved a little slowly in class and there was no real practice or application being done in class which would have been more helpful.
Class quizzes
The most challenging aspect of STA 235 for me was learning how to interpret and apply probability and statistical inference concepts, particularly when transitioning from calculations to conceptual understanding. It was difficult at times to know which methods to use in different scenarios and how to properly explain the results in context. One way to help future students meet this challenge more effectively would be to include more guided, step-by-step example problems in class that focus not only on solving the problem but also on interpreting and communicating the results in plain language.
It was hard during the tests. SOfme of the questions I was not prepared for.
He did not teach as well to the online sections as the in person ones. I found myself watching the lectures that he gave in person instead of the online section. Additionally, the homeworks were full of mistakes that made them discouraging to work on.
storytelling questions on the exams, wish there was more practice given for these types of questions
The midterm and final are BRUTAL but you get used to the material after a while.
One aspect I felt that was challenging about the course were the class quizzes. Sometimes they were difficult and it was hard to understand what question was being asked.
I think that it was way too many topics for one semester. The classes felt rushed at times and didn't give us much time to synthesize the material to effectively apply on assignments.
The lectures were hard to follow
The in class quizzes were hard because we only got one attempt.
Didn't see much instructor engagement and the exam arrangements were poor. I would appreciate better focus in this matter.
I found the in class quizzes and exams challenging
The aspect of the course I find the most challenging is probably the exams, would love to get more alike problems on practice.
this course is challenging overall, but so much help is offered which is amazing
The most challenging were the quizzes and tests. I found them challenging because sometimes the questions can seem off or hard to understand, and the high value of these assignments. Increase the amount of practice problems (so students get more exposure) by adding supplementary practices (optional) that can be done alongside the homework if needed.
The course content was difficult, and the class was very intense.
N/A
The testing environment was a bit challenging. Many of our laptops were dying, and we were frequently disconnected from the internet, which caused us to restart our code and lose valuable time. We also had to log back into the lockdown browser and go through the two-step authentication process each time. Overall, it was very stressful and not an ideal testing setting.
The course was advertised as not having to use R but then, midway through the course, we only used R. I believe R to be an inefficient way of doing statistics, but also, it was simply done poorly and the principles weren't explained well.
Certain concepts and coding since it is not a strength for me. What I recommend students to do is to review any topic that may seem difficult.
Not very organized lectures, at times all over the place. Not very clear on what to know for exams
N/A
A lot of work that takes a lot of time for a two hour class, I suggest not a quiz every class and maybe group homeworks and make them lest often
There was some discrepancy between what was covered in the lecture and the homework, so this made the assignments more difficult. More linearity can help.
I found the quizzes to be pretty challenging since we didn't really get a lot of time to practice a concept before being tested on it.

Comment

The beginning of class quizzes were overwhelmingly challenging. I found myself trying to frantically prep for quizzes instead of actually learning content.

College, School, or Unit Questions

Report Guide

Guide to the Interpretation of Course Evaluations at UT Austin

The goal of course evaluation process at UT Austin is to drive teaching excellence and to support continuous improvement in teaching and learning experiences. The two sets of scales used for core evaluation questions and the associated weights are:

Strongly Agree (5)
Agree (4)
Neutral (3)
Disagree (2)
Strongly Disagree (1)

Excellent (5)
Very Good (4)
Satisfactory (3)
Unsatisfactory (2)
Very Unsatisfactory (1)

The Mean is calculated by adding all of the weights for a single question and dividing by the number of respondents. The course workload question is not averaged.

The number of students (e.g. respondents) marking each option is reported for each of the items. These frequency distributions provide information about the level of student ratings and the spread and shape of the class distribution of responses. The distributions thus provide a picture of student perception of a course.

Course evaluations provide snapshots of student perspectives on their course-level learning experiences. Most experts on teaching evaluation advise that no individual method gives the complete picture of an instructor's teaching effectiveness; multiple and diverse measures, on multiple occasions, are advised to give a full picture of the teaching effectiveness of a particular instructor. Moreover, other factors, such as size of class, level of the class, and content of the course, can cause small variations in the ratings. Therefore, student perspectives for a particular instructor or course should be interpreted as a snapshot, and not as providing complete information on the teaching effectiveness of that instructor.
