Guide to the Interpretation of Course Evaluations at UT Austin

The goal of course evaluation process at UT Austin is to drive teaching excellence and to support continuous improvement in teaching and learning experiences. The two sets of scales used for core evaluation questions and the associated weights are:

Strongly Agree (5)
Agree (4)
Neutral (3)
Disagree (2)
Strongly Disagree (1)

Excellent (5)
Very Good (4)
Satisfactory (3)
Unsatisfactory (2)
Very Unsatisfactory (1)

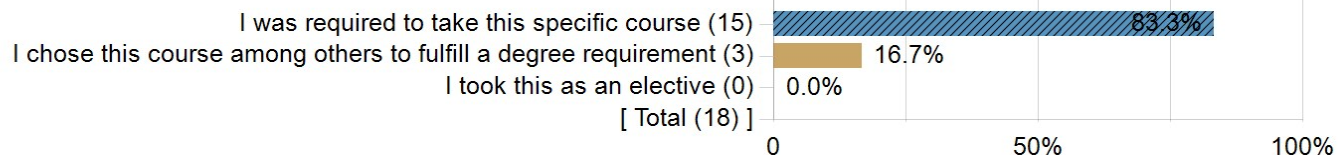

The Mean is calculated by adding all of the weights for a single question and dividing by the number of respondents. The course workload question is not averaged.

The number of students (e.g. respondents) marking each option is reported for each of the items. These frequency distributions provide information about the level of student ratings and the spread and shape of the class distribution of responses. The distributions thus provide a picture of student perception of a course.

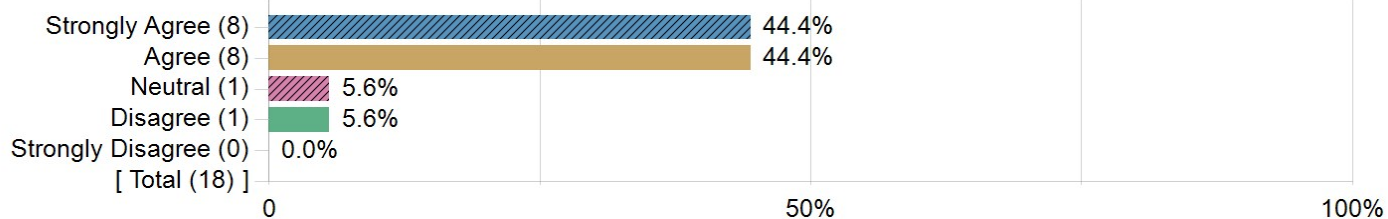

Course evaluations provide snapshots of student perspectives on their course-level learning experiences. Most experts on teaching evaluation advise that no individual method gives the complete picture of an instructor's teaching effectiveness; multiple and diverse measures, on multiple occasions, are advised to give a full picture of the teaching effectiveness of a particular instructor. Moreover, other factors, such as size of class, level of the class, and content of the course, can cause small variations in the ratings. Therefore, student perspectives for a particular instructor or course should be interpreted as a snapshot, and not as providing complete information on the teaching effectiveness of that instructor.

Course Questions

Why did you take this course?

During this course, I gained a deeper understanding of the subject matter.

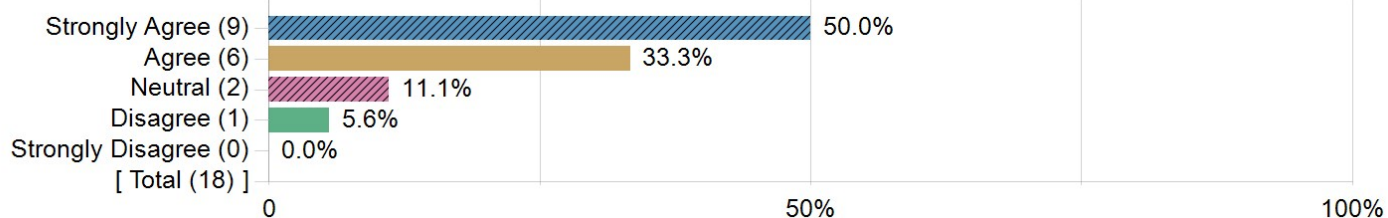

Statistics

Value

Mean

4.28

The course was well organized.

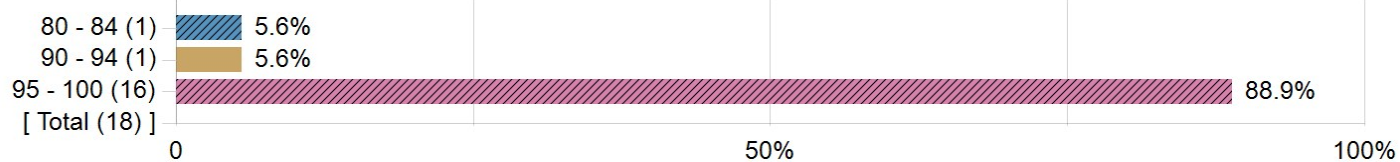

Statistics

Value

Mean

4.28

Overall, approximately what percentage of the course meetings did you attend or complete (online, in person, or asynchronously)?

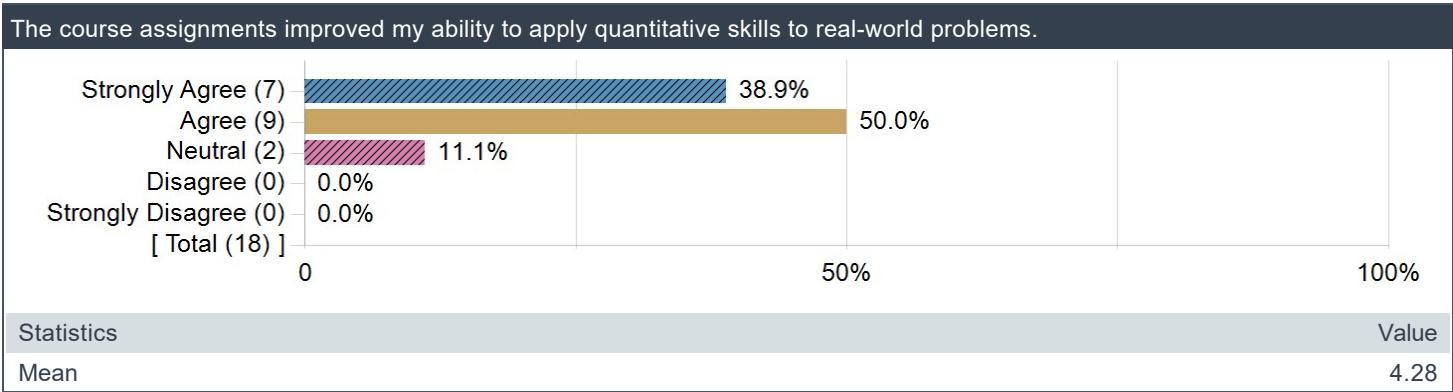

Statistics

Value

Mean

97.50

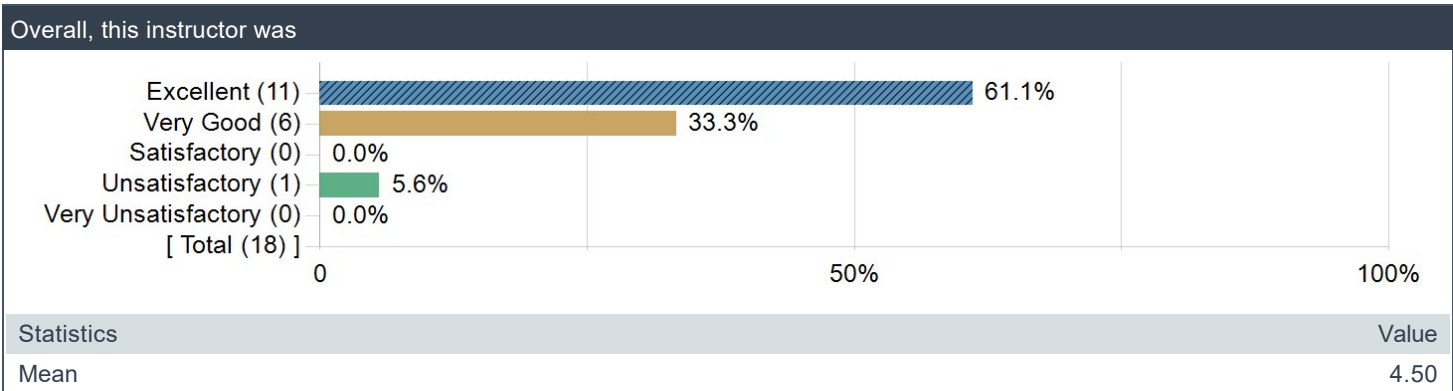

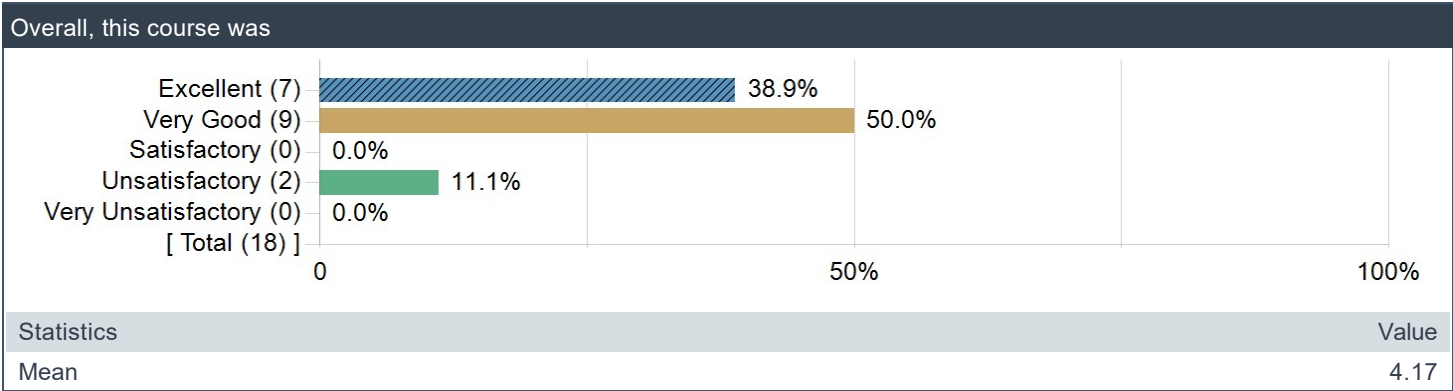

The course assignments improved my ability to apply quantitative skills to real-world problems. (Flag Question)

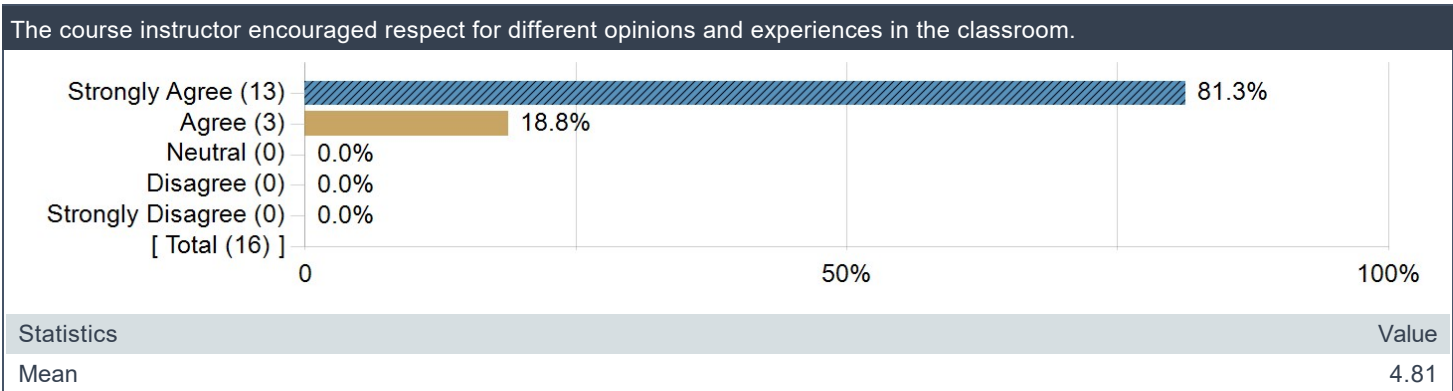

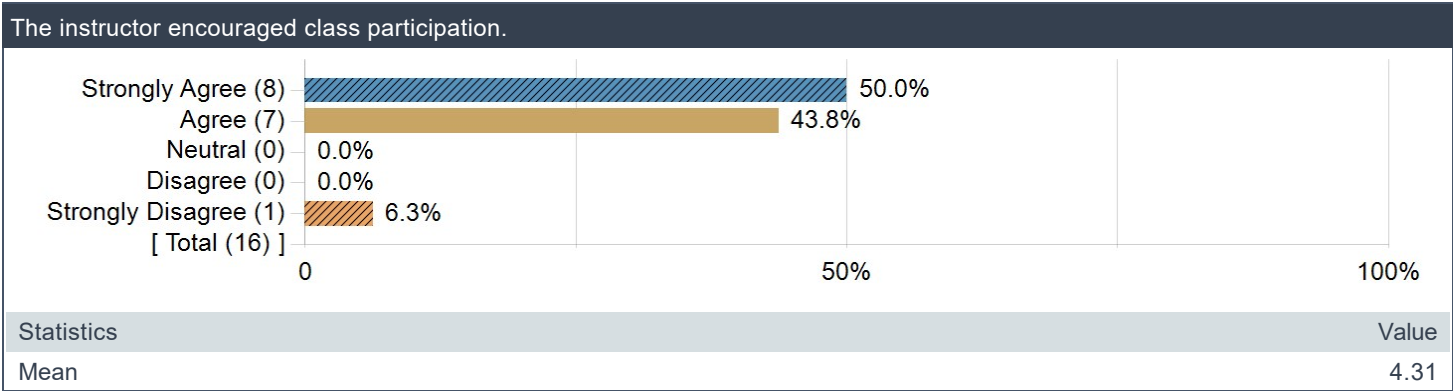

Instructor Questions

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree	Responded	Mean
The instructor clearly explained the course objectives and expectations.	55.6%	38.9%	0.0%	0.0%	5.6%	18	4.39
The instructor fostered an inclusive learning environment.	66.7%	16.7%	11.1%	0.0%	5.6%	18	4.39
The instructor effectively explained the concepts and subject matter in this course.	61.1%	33.3%	0.0%	0.0%	5.6%	18	4.44
The instructional techniques kept me engaged in learning.	55.6%	33.3%	5.6%	0.0%	5.6%	18	4.33
The instructor checked for student understanding of the concepts presented in the course.	61.1%	33.3%	0.0%	5.6%	0.0%	18	4.50

Overall Questions

College, School, or Unit Questions

Comment Questions

Identify aspects of the course that were the most effective in helping your learning.

Comments
doing majority of the lectures in r script helped me understand the applications of what we learned in class and how it applies. Going over the quizzes really helped me learn the content better.
The professor cared about knowing the material not just grades so it helped a lot
Reviewing quizzes together to teach about the thought process behind solving the questions
Professor was super kind and helped us understand concepts really well using r in class and providing an ample amount of resources
The in class R step by step walkthroughs.
Bolfarine is a good professor, he really cares about his students success and is a very chill guy.
The aspects that helped me learn the most were lectures.
Loved the way he went through each quiz and made sure we had DEEP understanding of why we did everything. He is the reason i will pass, i am terrible with coding
class quizzes
Working together through the R script and the practice
The in-class quizzes were most effective in helping my learning.
I think that doing examples in class was most effective in learning the material.
Having access to lecture recordings was VERY helpful. It allowed me to refresh on what i forgot or still learn if i had to miss class.
Professor Bolfarine explained the course content very well each class by helping us learn through practice problems and going very in-depth into making sure students understand.
He did in-class examples.

Identify the aspect of the course that you found most challenging, why you found it was challenging, and suggest one thing that could be done to help future students meet that challenge more effectively.

Comments
class was rushed in the end and could have been organized better, changing the way quizzes are done could improve this.
None
I found the quizzes to be difficult but overall helpful in understanding the content
The most challenging aspect were the in class quizzes. They were challenging because the class only meets once a week. In the future I would recommend that they should incorporate a new way of testing students' knowledge of the subject.
The quizzes were really hard, and they had a lot more weight than the exams
The most challenging part of the class was learning new concepts and trying to keep up in class.
If professor had let us do quizzes on our own, class average would have been below 50% for sure, loved my professor
homeworks
Examination, Weekly Quizzes
I found the exam most challenging. I think the homeworks were slightly easier than the exam, so potentially in the future it could be beneficial if the homeworks were slightly more challenging than the exam.
I felt like the first 5 weeks were just review from STA301, I feel like the rest of the material is fairly difficult so it would help a lot if we just skipped the review.
I think the checkpoint quizzes at the beginning of class were a little challenging because it went over stuff from the prior week, which sometimes I forgot about.
The homework assignments were challenging. In the future, there could be explanations provided after missing a problem for students to understand why they missed the problem.
R Studio is challenging as a software.
