Guide to the Interpretation of Course Evaluations at UT Austin

The goal of course evaluation process at UT Austin is to drive teaching excellence and to support continuous improvement in teaching and learning experiences. Course evaluations provide snapshots of student perspectives on their course-level learning experiences. Most experts on teaching evaluation advise that no individual method gives the complete picture of an instructor's teaching effectiveness, multiple and diverse measures, on multiple occasions, are advised to give a full picture of the teaching effectiveness of a particular instructor. Moreover, other factors, such as size of class, level of the class, and content of the course, can cause small variations in the ratings. Therefore, student perspectives for a particular instructor or course should be interpreted as a snapshot, and not as providing complete information on the teaching effectiveness of that instructor. For additional details, including the scales and how the Mean scores are calculated, please review the Report Guide at the end of this document or, [UT Austin's Viewing Course Evaluation Results webpage](#).

Creation Date: **Monday, July 6, 2026**

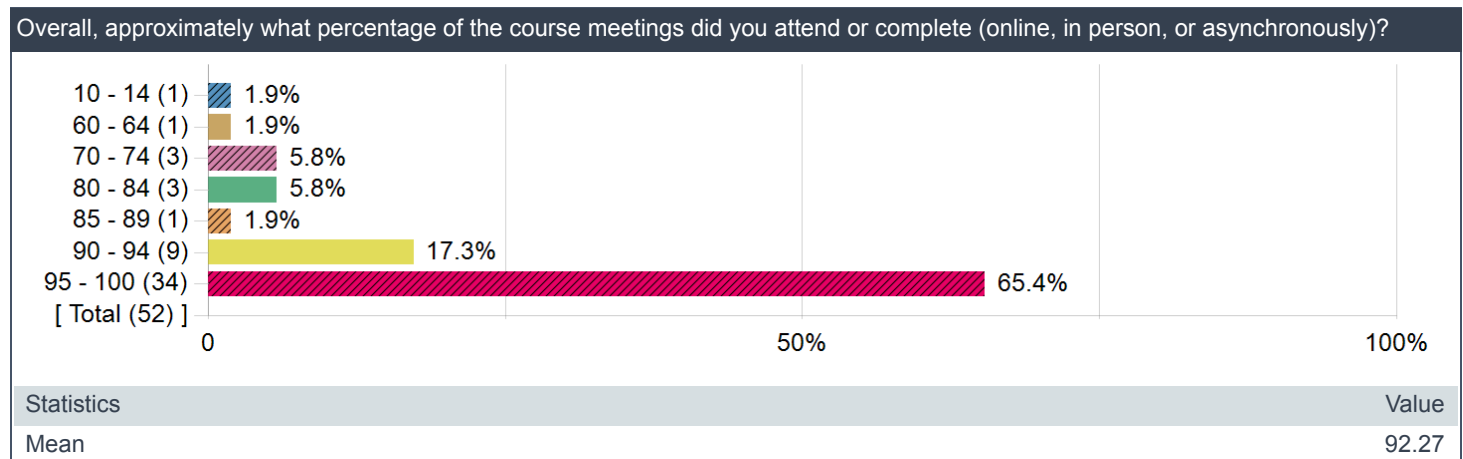

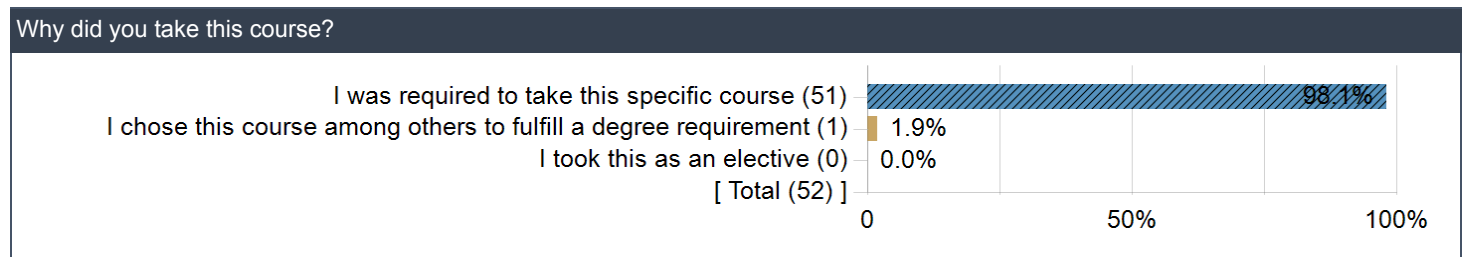

Core Questions

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree	Responded	Mean
During this course, I gained a deeper understanding of the subject matter.	44.2%	32.7%	17.3%	5.8%	0.0%	52	4.15
The course was well organized.	44.2%	34.6%	17.3%	3.8%	0.0%	52	4.19
The instructor clearly explained the course objectives and expectations.	59.6%	25.0%	13.5%	1.9%	0.0%	52	4.42
The instructor fostered an inclusive learning environment.	63.5%	28.8%	7.7%	0.0%	0.0%	52	4.56
The instructor effectively explained the concepts and subject matter in this course.	57.7%	26.9%	11.5%	3.8%	0.0%	52	4.38
The instructional techniques kept me engaged in learning.	48.1%	32.7%	13.5%	3.8%	1.9%	52	4.21
The instructor checked for student understanding of the concepts presented in the course.	55.8%	32.7%	11.5%	0.0%	0.0%	52	4.44

Overall Questions

	Excellent	Very Good	Satisfactory	Unsatisfactory	Very Unsatisfactory	Responded	Mean
Overall, this instructor was	50.0%	30.8%	17.3%	1.9%	0.0%	52	4.29
Overall, this course was	44.2%	25.0%	26.9%	3.8%	0.0%	52	4.10

Other Course Questions

Comment Questions

Identify aspects of the course that were the most effective in helping your learning.

Comments
When students were asking questions, he would in detail answer them. Always walked through every stepped an made sure to explain everything.
His lectures were recorded so I could go back and watch them, he is extremely nice sand always willing to explain whatever the students needed.
I found that the homeworks and weekly quizzes have helped me learn more within each unit.
Professor was so flexible in helping others learn at their own pace
Lectures
Professor Bolfarine was extremely open to answering questions and gave us practice exams that helped us to study for the actual exam.
The uploaded notes and lectures.
I liked the fact that he was very accommodating.
The homework and pre–class assignments were great ways to learn how to apply your knowledge and really helped me understand the material.
Labs
labs
outputs on the homework
Bolfarine is super kind and helpful in answering questions. He clarify's things several times which I found helpful. I think he is very engaging in the webinar course in the best way! I am thankful I had someone like him who believes in his students. I think this professor offered an inclusive environment by opening himself to questions at literally anytime.
One of the most effective aspects of this course was Professor Henrique Bolfarine's strong communication and responsiveness. He consistently replied to emails quickly, which made it easy to get help when needed. Even in an online setting, he took the time to thoroughly explain concepts and ensured that students understood the material. His effort to break down topics and teach them clearly made a significant difference in my learning experience.
The recorded lectures .
The Quizzes
Prof Bolfarine is fantastic! He is extremely knowledgeable and cares so much about students success! His content is very organized and well laid out and he was always open to student suggestions. The course ran very smoothly.
The most helpful component of this course for me were the lab videos posted for each section of material. It is super helpful to watch the prof walk through each of the questions on R studio.
The lectures were helpful.
na
Good online lectures
Homework assignments, weekly quizzes, and lab recordings.
labs
Frequent check–ins, online structure.
Being able to have a quiz at the beginining of class was very helpful in framing lectures in a very application–based way which was most effective in helping my learning.
N/A
The most effective aspect of the course was the professor's strong command of the subject matter. Their deep understanding made the material feel clear, structured, and credible, while also allowing them to connect concepts and answer questions effectively. In addition, the explanations were very helpful. Complex topics were broken down into simple, understandable steps, which made it easier to follow along and retain key ideas.
Taking time at the start of class to review material and clarify common questions and concerns
Consistetn practicing in code to understand what exactly was occuring when running models
The lectures that I could rewatch when I didnt understand something.
Bolfarine is an incredibly professional and organized professor and he has been very helpful in understanding the concepts. He would go over topics several times and make connections between different concepts to make them easier to understand.
very patient and understanding.
Answering questions and review in class, recordings

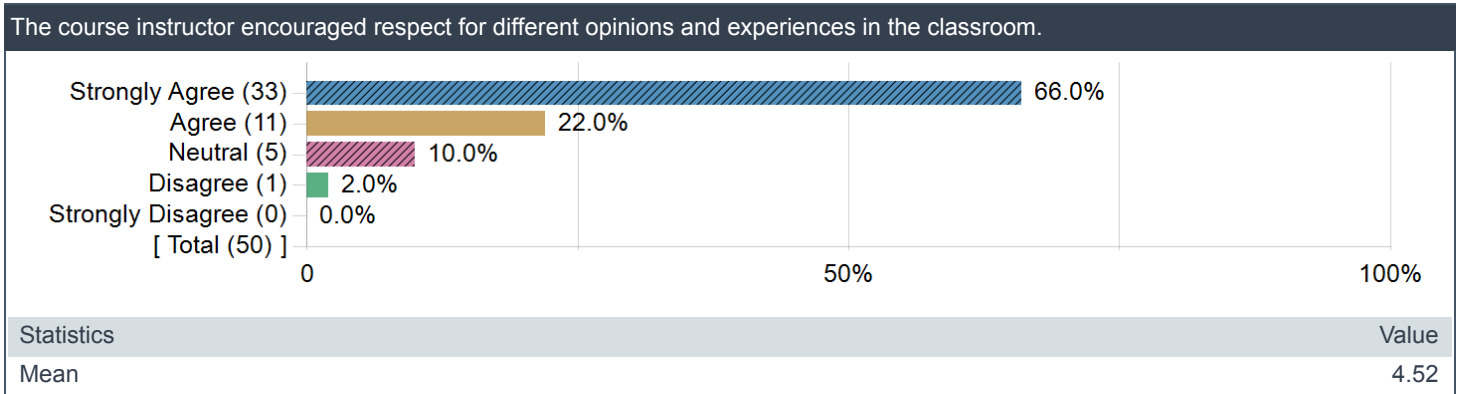

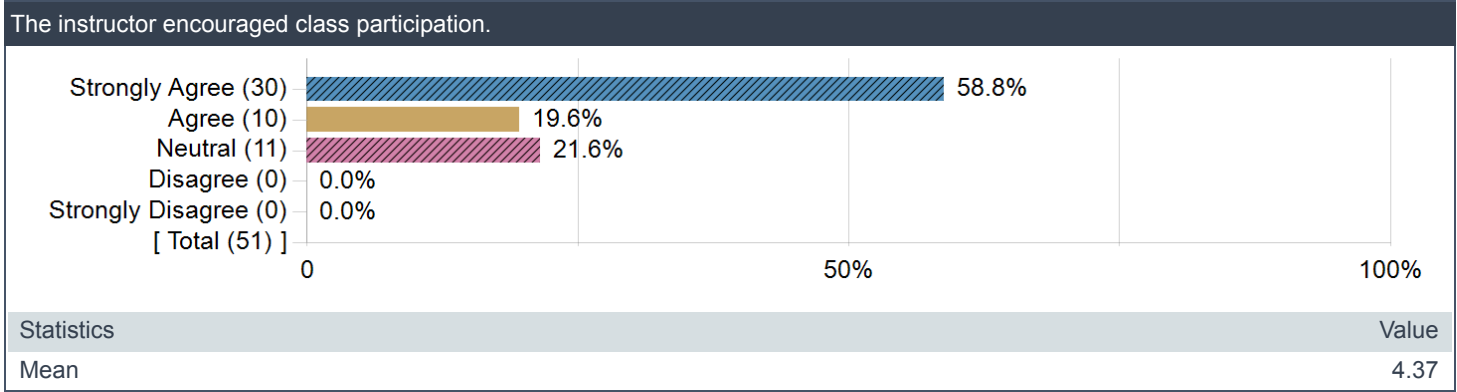

Comments
The language used to explain the concepts made it a lot easier to comprehend.
In-class walkthrough and lab videos helped a lot in learning the material and applying it.
The lab recording lecture videos were extremely helpful for me. It helped me practice my coding and get it down.
Labs
I like all the content the professor put out there to help us learn more about the class.
Most effective was homework and slideshows
great

Identify the aspect of the course that you found most challenging, why you found it was challenging, and suggest one thing that could be done to help future students meet that challenge more effectively.

Comments
n/a
2 hours is a long time to pay attention sometimes our lectures got cut short i didn't like how we had to watch a seperate lab maybe jump into teaching content immediately and take questions at the end of class? mid semester grade check?
I found the exams the most challenging.
Being online was tough, it made no sense why we had to use lockdown browsers for everything, it didn't help those who are not good test takers
Exams
I think some of the things we focused less on showed up quite a bit on exams which made it somewhat confusing sometimes to know what all to focus on when studying.
The additional explanation needed outside of normal class ours.
Nothing
I found the exams to be the most challenging, I felt like they were a lot harder than the practice material, and I believe it would help me if we could get practice material more on par with the exams or more than one page for reference notes.
quizzes
exams
exam was way harder than hw in my opinion, a bit discouraging
I found the material is hard to do on my own. I dislike the exam format of this specific lockdown browser, which gives me issues while taking the exams. Another lockdown browser should be purchased or an alternative solution should be found, as this creates anxiety for students when taking the exam and attempting to go back to the scripts. This is an issue that is outside of Bolfarine's control; however the statistics department needs to try another way with the computers.
One of the most challenging aspects of the course was the use of the lockdown browser during exams. It often took extra time to set up or troubleshoot, and since the exams were timed, any technical difficulties reduced the time available to actually answer questions. This added unnecessary stress and sometimes put students at a disadvantage if the browser was not working properly. To help future students, I suggest either removing the lockdown browser requirement or allowing additional time on quizzes and exams to account for potential technical issues.
It was paying attention during the lectures.
The exams were pretty difficult, and maybe in the future some study methods can be recommended.
I think the auto graded perusal assignments were a bit annoying. The content of them was helpful, but it was annoying to have them graded by a computer because it was kind of random.
I think the sheer amount of material in this class can be challenging. There is a lot to remember with all of the different R studio functions so I think a one-sheet "cheat sheet" made by the instructors with the most important reminders and R studio functions would be super helpful in this course.
It is a very hard course and the honor lock makes it inefficient and challenging to take tests
na
The professor did not have the most engaging lectures
Perusal – did not teach me much, just seemed like busywork.
very slow
I think he could use a little work on his lecturing, very unengaging and confusing.
At times I found the exam proctoring method tedious to work with as it would glitch during my time with taking the midterm. Something that could be done to help future students meet that challenge more effectively would be to be patient and understanding with the professors which are working to get proctoring glitches solved soon.
N/A
The most challenging aspect of the course was the exams. Providing more practice problem sets to solve would help prepare.
Lectures were sometimes off topic or lengthy to where it would be difficult to pay attention for long periods of time
Exams that were open ended simply because you must memorize long code on top of what the code output represents
The professor would take too long to talk about some subjects and would repeatedly go over our class time.

Comments
just an overall very confusing class, hard so understand without tutoring. the lectures and the quizzes/exams dont really correlate perfectly. homeworks are more like quizzes than the way the lectures are taught.
asynchronous layout
The content was heavy, and relatively new. One thing would be to have more practice exams.
Ensuring each class covers the coding part even if its just a little bit. Most of the actual class meetings are conceptual and then there's a separate class video for just the code.
The most challenging aspect was the interpretations. I think just going over more interpretation questions in class would be helpful.
Understanding concepts during lectures
I feel like at some points some content in the class was useless because students were just trying to find a way to pass the quizzes and home work rather than truly learning the content. Also the problems students faced with the lockdown browser are endless and the department should consider switching to another program.
The most challenging was following along in class during two-hour sessions, often running over time.
nothing

College, School, or Unit Questions

Report Guide

Guide to the Interpretation of Course Evaluations at UT Austin

The goal of course evaluation process at UT Austin is to drive teaching excellence and to support continuous improvement in teaching and learning experiences. The two sets of scales used for core evaluation questions and the associated weights are:

Strongly Agree (5)
Agree (4)
Neutral (3)
Disagree (2)
Strongly Disagree (1)

Excellent (5)
Very Good (4)
Satisfactory (3)
Unsatisfactory (2)
Very Unsatisfactory (1)

The Mean is calculated by adding all of the weights for a single question and dividing by the number of respondents. The course workload question is not averaged.

The number of students (e.g. respondents) marking each option is reported for each of the items. These frequency distributions provide information about the level of student ratings and the spread and shape of the class distribution of responses. The distributions thus provide a picture of student perception of a course.

Course evaluations provide snapshots of student perspectives on their course-level learning experiences. Most experts on teaching evaluation advise that no individual method gives the complete picture of an instructor's teaching effectiveness; multiple and diverse measures, on multiple occasions, are advised to give a full picture of the teaching effectiveness of a particular instructor. Moreover, other factors, such as size of class, level of the class, and content of the course, can cause small variations in the ratings. Therefore, student perspectives for a particular instructor or course should be interpreted as a snapshot, and not as providing complete information on the teaching effectiveness of that instructor.
